

CLAIMS

1. A one touch-type container stopper, comprising:
a hermetically sealing part having a plurality of first supporting protrusions at a
5 lower end thereof, the first supporting protrusions being formed to protrude inwardly such
that they are elastically supported along an outer peripheral surface of a mouth of the
container, the sealing part being fitted around the mouth to seal the container; and
a cover part having a hinge part formed integrally with and extending from the
first supporting protrusions and then bent, and a plurality of second supporting protrusions
10 at a lower end thereof to protrude inwardly therefrom, the cover part being positioned
outside of the sealing part,
wherein the second supporting protrusions are connected to one another through a
band member.
- 15 2. A one touch-type container stopper, comprising:
a hermetically sealing part having a plurality of first supporting protrusions at a
lower end thereof, the first supporting protrusions being formed to protrude inwardly such
that they are elastically supported along an outer peripheral surface of a mouth of the
container, the sealing part being fitted around the mouth to seal the container; and
20 a cover part having a hinge part formed integrally with and extending from the
first supporting protrusions and then bent, and a second supporting protrusion at a lower
end thereof to protrude inwardly therefrom, the cover part being positioned outside of the
sealing part.
- 25 3. The one touch-type container stopper as claimed in claim 1 or 2, wherein the
height of the cover part is larger than that of the sealing part.
4. The one touch-type container stopper as claimed in claim 1 or 2, wherein a friction
member is further provided between the sealing part and the cover part.

5. The one touch-type container stopper as claimed in claim 1 or 2, wherein the hinge part has an inclination such that the sealing part side is at a level higher than that of the cover part side.

5 6. The one touch-type container stopper as claimed in claim 1 or 2, wherein a cover member is further provided at a lower end of the cover part to surround the second supporting protrusions or protrusion.

7. A container, comprising:
10 a body portion of the container having a first catching projection at an upper end of a mouth thereof, and a second catching projection formed below the first catching projection, the second catching projection having an outer diameter larger than that of the first catching projection; and
a stopper having a hermetically sealing part fitted around the mouth to seal the
15 container, and a cover part positioned outside of the sealing part,
wherein the sealing part is provided with a plurality of first supporting protrusions at a lower end thereof to protrude inwardly such that they are caught and elastically supported by the first catching projection, and
the cover part is provided with a hinge part formed integrally with and extending
20 from the first supporting protrusions and then bent, and a plurality of second supporting protrusions at a lower end thereof to protrude inwardly therefrom, the second supporting protrusions being connected to one another through a band member.

8. A container, comprising:
25 a body portion of the container having a first catching projection at an upper end of a mouth thereof, and a second catching projection formed below the first catching projection, the second catching projection having an outer diameter larger than that of the first catching projection; and
a stopper having a hermetically sealing part fitted around the mouth to seal the
30 container, and a cover part positioned outside of the sealing part,

wherein the sealing part is provided with a plurality of first supporting protrusions at a lower end thereof to protrude inwardly such that they are caught and elastically supported by the first catching projection, and

5 the cover part is provided with a hinge part formed integrally with and extending from the first supporting protrusions and then bent, and a second supporting protrusion at a lower end thereof to protrude inwardly therefrom.

9. The container as claimed in claim 7 or 8, wherein a hermetically sealing member
10 part.
